LOCKHEED "VEGA" DL-1

Lockheed "Vega" DL-1  
The Lockheed Vega DL-1 was the first of a series of single-engine, high-wing, cantilever monoplane aircraft designed and built by Lockheed Aircraft Corporation. It was the first aircraft to be built with a cantilever wing, a wing that is not supported by struts or bracing. The Vega DL-1 was the first aircraft to be built with a cantilever wing, a wing that is not supported by struts or bracing. It was the first aircraft to be built with a cantilever wing, a wing that is not supported by struts or bracing.

LOCKHEED "VEGA" DL-1

**Lockheed YC-12**

Lockheed produced the YC-12 from 1952 to 1953. Because of its high capacity, many YC-12s were pressed into military service. Power: 400 hp Cruise Speed: 140 mph Fuel: 2,000 gal Capacity: 12 passengers

This is the original YC-12 that flew from Atlanta, Georgia to New York City in 1953.
