

**HO SCALE CORNERSTONE SERIES - UNION CRANE AND SHOVEL  
MODEL BY MIKE ASHEY**

This kit went together well. There was a slight void at one end of each of the upper window frame sections that connect to the roof. The voids were hidden with small diameter round stock to represent rain downspouts. The two long decals were cut into sections and then applied with decal setting solution. The kit was painted with Testors enamels, the brick mortar was painted using diluted water base paint and pencil pastel dust was used for the weathering.
